

What Is Laser Therapy, and How Can It Help Your Pet?

Laser Liaison™

Comprehensive Practice-Building and Laser Educational Program

A New Solution for Your Pet

We are excited to be able to offer you:

Laser Therapy!

Laser Therapy is used to...

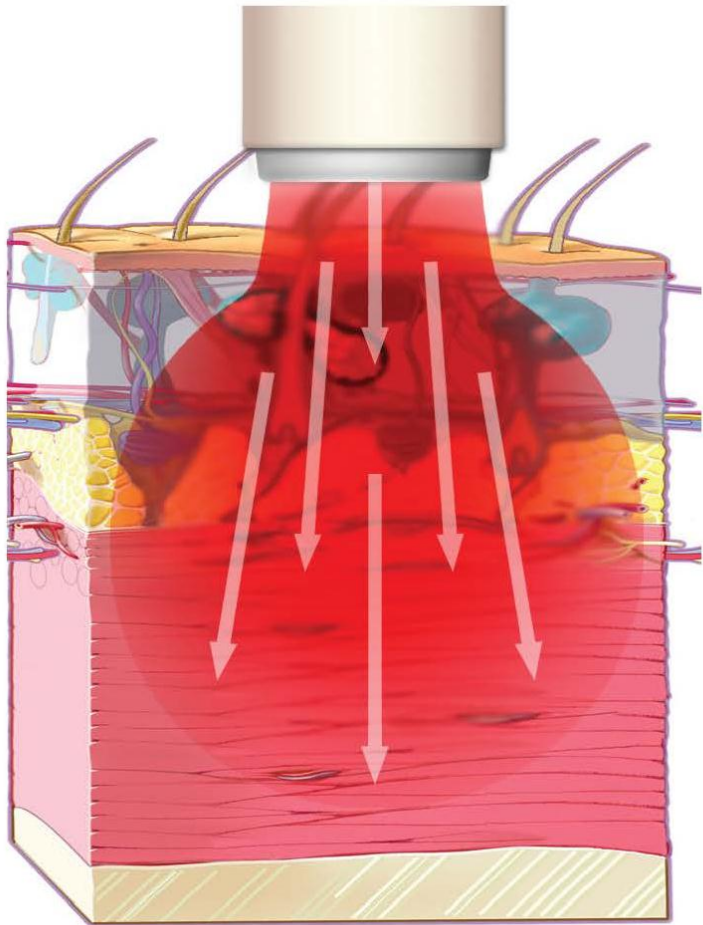

- Reduce pain and discomfort
- Speed healing
- Increase mobility and motion in joints
- Reduce swelling

COMPANION
THERAPY LASER
LifeCure, LLC

How does laser therapy work?

- Photons of laser light penetrate deep into tissue
- These photons are absorbed in the cells which initiates a photo-chemical response

How does laser therapy work?

This response in the cells blocks nerve impulses, accelerates tissue repair, increases circulation, and reduces swelling.

Which pets benefit from laser therapy?

If your pet is in pain, has inflammation, or has a wound, laser therapy can be beneficial.

This includes patients that have the aches and pains of old age, who have just had a surgical procedure, or who have an open wound or recent injury.

A Therapy You Can Trust.

Your pet is in good company when receiving Companion Laser Therapy. It is being used by:

- Over 2000 veterinary hospitals
- Dozens of Professional Sports Teams
- Physical Therapists
- Orthopedic Practices
- And others in the human and veterinary medicine fields

Sports Teams

Sports Teams are raving about the results they are seeing!
